Supplemental Figure 1

Supplemental Figure 1: Lmo1656 is a *bona fide* virulence factor of *Listeria monocytogenes*

A. *Lmo1656* does not contribute to virulence in mice infected intravenously. BALB/c mice were infected with either *Lm* ^{WT}, *Lm* $^{\Delta lmo1656}$, or the complemented *Lm* $^{\Delta lmo1656+C}$ intravenously. (n=6 mice per *Lm* genotype). B. *Lmo1656* does not significantly affect bacterial burden in the mesenteric lymph nodes and the intestinal contents of orally-infected mice. These results correspond to the same animals infected in (**Figure 3C,3D**).

Supplemental Figure 2

Supplemental Figure 2: Lmo1656-FLAG shows a diffuse cytoplasmic staining
Cells were transfected with a plasmid encoding Lmo1656. Twenty-four hours post transfection cell were stained with the indicated antibodies.
